

## D2500

The D2500 has been designed for customers with a medium output, to fill liquid and viscous products in containers up to 125mm Dia. The D2500 is a 9 pocket machine which has a maximum fill of 500m/l and an maximum output of 2500 CPH (Cups per hour). The D2500 can be run using a pre-cut foil and snap-on lid. All components in contact with the product are made from Stainless Steel.

Containers are automatically de-nested into the table. The table then indexes around below each station. Filling is by means of a piston type pump, which fills a consistent measure each cycle. Pre-cut foil lids are dispensed and placed on top of the container before being sealed. The machine is also capable of placing a snap-on lid prior to being ejected. Date coders can be fitted either before or after a snap-on lid being applied. The machine also employs a detection system, i.e. No Cup, No Fill, No Foil, No Heat-seal, No Date Code. The D2500 has the flexibility to run products requiring and pre-fill as well as the main fill.

**Machine is suitable for the following products:**

- Cream
- Yoghurt
- Cream Cheese
- Cottage Cheese
- Fruit Juices
- Jams
- Pastes
- Mayonnaise
- Honey
- Coleslaw

### Technical Data:

<b>Total Power Requirements:</b>	1 Kw
<b>Compressed Air Requirements:</b>	140 Ltr/min at 6 Bar 5 CFM at 90 PSI
<b>Heating Requirements:</b>	600 Watts
<b>Speed:</b>	2600 Max Cups Per Hour
<b>Filling Range:</b>	500ml
<b>Maximum Cup Dia:</b>	125mm
<b>Maximum Cup Height:</b>	125mm
<b>Dimensions:</b>	Height 1990 mm Width 1320mm Depth 750 mm
